**GREENPOWER CAPITAL SECURES FUNDING FOR
3 MEGA-SOLAR PROJECTS IN JAPAN**

TOKYO, JAPAN – 16 March 2015: Japan solar developer and investor Greenpower Capital has announced funding for 3 Mega-Solar projects in Japan.

Kokubu 1 MW is located in Kagoshima, and is planned for construction in Q3 2015 following final issuance of the agricultural conversion certificate.

Shimonoseki 1 MW is located in Yamaguchi, and is being prepared for construction in Q2 2015.

Kimitsu 1 MW, located in Chiba, is under construction to complete in March 2015.

With approval by Japan's Ministry of Economy, Trade and Industry, these projects will sell power to Kyushu Power, Chugoku Power, and Tohoku Power through a 20-year power purchase agreement at a fixed tariff rate. With Japan looking to diversify its power generation mix, it has set a goal of producing about 20 percent of its power from renewable sources by 2030.

“Our primary focus is on partnering with local developers and landowners to fund and develop projects from 10-50 MW in size”

Greenpower Capital's CEO, Dick Talbert, stated “Our primary focus is on partnering with local developers and landowners to fund and develop projects from 10-50 MW in size, but we also facilitate funding and acquisition of smaller projects quite regularly. We can normally get these projects acquired in 1-2 months from the time we get engaged. Developers have been very happy with the high prices and fast execution that we are able to offer.”

Greenpower Capital has 14 projects totaling over 200 MW that will be completed or planned to start construction in 2015, with an overall goal of 300MW constructed under the Japan FiT program.

About Greenpower Capital

GPC is based in Los Angeles with offices in Japan and Canada and focuses on project development, finance and M&A for solar and wind projects in Japan, North and South America, the Caribbean Islands and Europe. GPC's principals have developed large-scale solar projects in multiple countries.

GPC JAPAN

GPC's Tokyo offices are located in the Marunouchi District, with a bi-lingual staff of 8 business development and technical professionals. GPC has the flexibility to partner with local developers and landowners to fund and develop projects. Along with its partners, GPC can provide the entire value chain from initial site selection through the development, legal, financing, construction, and final project sale process.
